## R4DS Exercises

3.5.1.2. What do the empty cells in plot with `facet_grid(drv ~ cyl)` mean? How do they relate to this plot?

```
ggplot(data = mpg) +  
  geom_point(mapping = aes(x = drv, y = cyl)) +  
  facet_grid(drv ~ cyl)
```

"It means there is no valid data meeting the requirement of drv and cyl, that is, the number of cylinders"

```
## [1] "It means there is no valid data meeting the requirement of drv and cyl, that is, the number of cylinders"
```

"In this way, we can divide the data into specific groups with specific factors so we can compare the cylinders"

```
## [1] "In this way, we can divide the data into specific groups with specific factors so we can compare the cylinders"
```

### 3.5.1.3. What plots does the following code make? What does . do?

```
ggplot(data = mpg) +  
  geom_point(mapping = aes(x = displ, y = hwy)) +  
  facet_grid(drv ~ .)
```

"The plot adds the third variable the way of driven on the row."

```
## [1] "The plot adds the third variable the way of driven on the row."
```

```
ggplot(data = mpg) +  
  geom_point(mapping = aes(x = displ, y = hwy)) +  
  facet_grid(. ~ cyl)
```

```
"The plot adds the third variable the number of cylinders on the column."
```

```
## [1] "The plot adds the third variable the number of cylinders on the column."
```

## Rewrite the shiny app

### Lake Huron

```
#Load the data of Lake Huron
LakeHuron <- data.frame("year" = 1875:1972, "level" = LakeHuron)
#Plot broken line
ggplot(data = LakeHuron, aes(x <- year, y <- level)) +
  geom_line()
```

```
## Don't know how to automatically pick scale for object of type ts. Defaulting to continuous.
```

```
#Add smooth line  
ggplot(data = LakeHuron, aes(x <- year, y <- level)) +  
  geom_point() +  
  geom_line() +  
  geom_smooth()
```

```
## Don't know how to automatically pick scale for object of type ts. Defaulting to continuous.  
## `geom_smooth()` using method = 'loess' and formula 'y ~ x'
```
